

Dear New York Medical Office,

One of the best ways to lower overhead and increase practice revenues is to cut costs on the products you currently use. As a Partner of CDW Healthcare, we are proud to introduce our premiere IT Services Provider: Technika TS.

Following this letter you will be contacted by a Technika TS representative to discuss the Information Technology needs of your facility. This will consist of a complimentary IT Audit of your facility. If you decide to participate, the Technika TS representative will also be able to assist you in setting up a special account to make sure you receive the discounted prices with CDW healthcare.

CDW healthcare is a leading vendor of Healthcare IT Integration Hardware and you will be able to order from them at substantial discounts via their website.

Your organization can access negotiated contract prices on all the Professional IT Services needed to support your practice. The prices negotiated compare to those that are reserved for large hospital groups. As a participating member, you will save substantially when purchasing your products.

The choice is no longer whether or not you will computerize your office; the only choice you have is when, as long as it is before 2014. In April 2004, the President issued an executive order mandating the computerization of health records by the year 2014. Congress then passed HIPAA, which gives the President's edict the legal support of Federal law.

- Have you ever been the victim of a computer virus, or do you know someone who has?
- What would happen if the computer storing your patients' medical information failed?
- Do you worry that someone might eavesdrop on your wireless communications?

What your network should look like:
